

Session – 9 MongoDB Tools

Tasks:

1. Install MongoDB Compass on your system, connect to your local MongoDB server, and create a new database named spotifyDB with a collection called playlists.

→ use spotifyDB

2. Using MongoDB Compass, import a JSON file containing at least 10 sample restaurant documents (name, cuisine, rating) into a new collection named zomatoRestaurants in your spotifyDB database.

Session – 9 MongoDB Tools

3. Export:

The screenshot shows the MongoDB Compass interface. On the left, the 'CONNECTIONS' panel lists 'localhost:27017' with a tree view showing databases like 'admin', 'config', 'foodieApp', 'local', and 'spotifyDB'. The 'spotifyDB' database is selected, and the 'zomatoRestaurants' collection is highlighted. The main panel displays the 'Documents' tab for the 'zomatoRestaurants' collection. A query bar at the top shows 'Type a query: { field: 'value' } or [Generate query](#)'. Below the query bar, there are buttons for 'ADD DATA', 'BULK', 'EXPORT DATA', and 'EXPORT CODE'. The 'EXPORT DATA' button is active. The document list shows five documents with fields: '_id', 'name', 'cuisine', and 'rating'. A notification banner at the bottom left states 'Export completed. 10 documents written.' with a 'SHOW FILE' link.

localhost:27017 > spotifyDB > zomatoRestaurants
